

Measurement Estimations

For each object shown below, first estimate the length, width, and mass. Record your data in the E (estimate) column for each object. Then measure the object and record your data in the A (actual) column. For the blank Object boxes, choose a square object in the room, draw the object, and then make estimates and measurements.

Object	Length		Width		Mass	
	E	A	E	A	E	A
